

IN THE SPECIFICATION

Please replace the Abstract with the amended Abstract as follows:

~~The present invention relates to a~~ A series of successively sized segmented arcuate pipe couplings in which ~~an~~ anti-mismatch members are ~~means is~~ provided to prevent the inadvertent connection of two different, but closely[[,]] sized [[arcuate]] coupling segments together. The anti-mismatch ~~means is provided by members~~ features are provided on the ends of the arcuate coupling segments which (a) will nest when the proper coupling segments are brought together, but (b) will be in an interference non-nested relationship when a mismatch is attempted. This will prevent the fully bolt tightened connection of the size mismatched coupling segments, as well as a visual indication to a user ~~the workman~~ that a size mismatch is being attempted.
